Assignment 1

Date: _____

ICT Applications in Industries

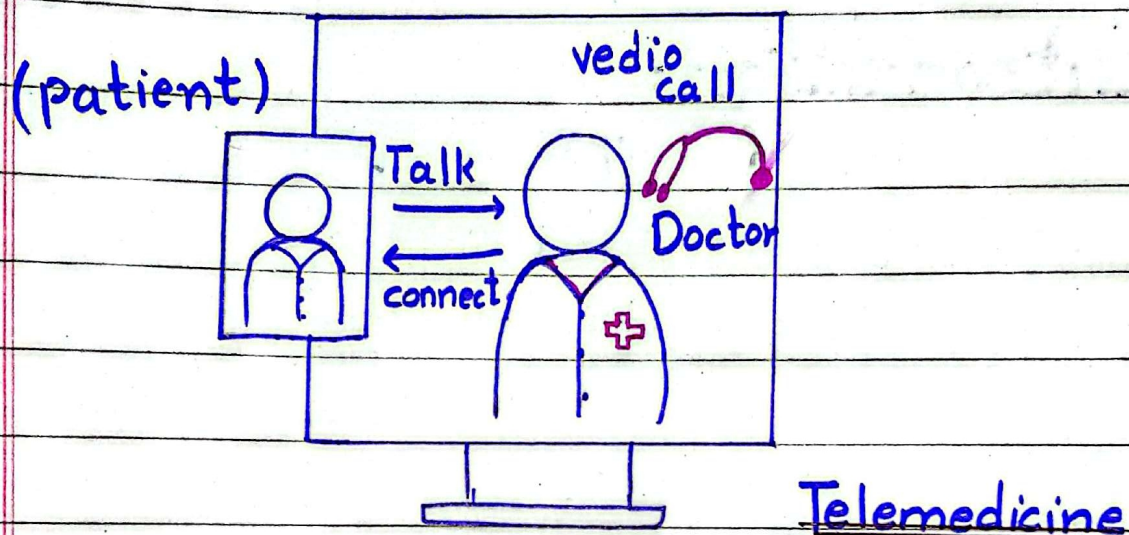

Introduction:

ICT stands for information and communication Technology. It refers to the integration of computing and telecommunication technologies. It include computers, network and communication devices. ICT is essential, because it works faster and smater by automating processes and improving data management.

Health Industry:

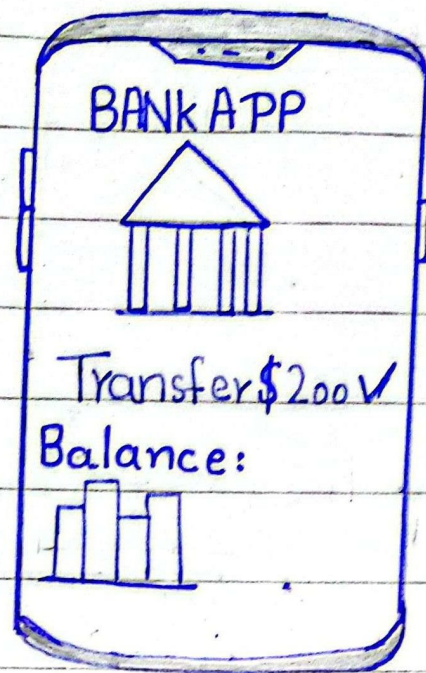

ICT has revolutionized healthcare through Telemedicine and online patient records. These tools allow doctors to consult with patients remotely.

and access medical history instantly, leading to more accurate diagnoses and timely treatments

Banking:

The banking sector heavily relies on online banking and digital payments. These technologies enable customers to transfer funds, pay bills and manage account 24/7 anywhere in the world without visiting physical branch of bank.

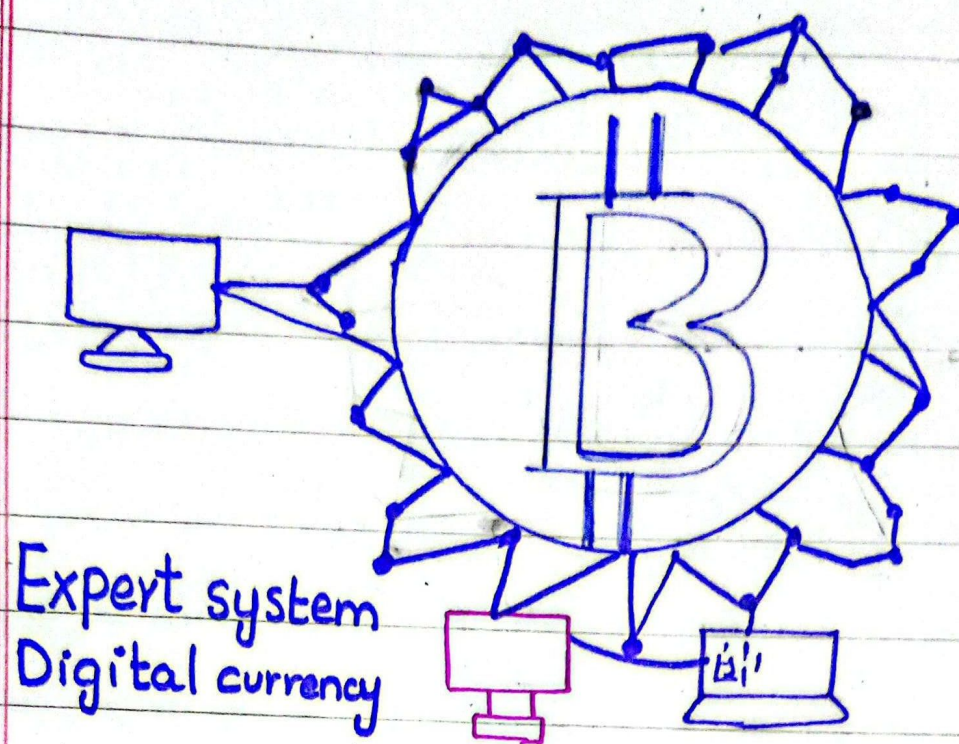

online
Banking

Expert system and Digital Currencies:

Expert systems are AI-based programs that mimic human experts to help in complex decision-making processes.

Digital Currencies: include Bitcoin Which uses decentralized technology to allow secure, peer to peer financial transactions.

Conclusion:

Overall, ICT significantly improves work efficiency and the quality of services across society making daily operations more streamlined and accessible. ICT improves efficiency, save time and enhance services in all industries. It plays important role in society.
