(CSC101)

Applications of Information and Communication Technologies

Assignment No. 4

(CLO-5): Describe the concepts of variables, conditional, repetitive structures, and functions using a programming language. (10 Marks)

Instructions:

1. Write the Python program in **VS Code / PyCharm / any Python IDE** and execute it successfully.
2. Take **clear screenshots of:**
 - Your complete code
 - Program output after running
3. Write a short **explanation of your program (5–8 lines)** in your own words.
4. Create a **single PDF file** containing:
 - Title page (Name, Roll No, Course, Assignment No.)
 - Python code
 - Explanation
 - Screenshots of running output
5. Ensure the PDF is neat, properly formatted, and readable.
6. Submit the final PDF on or before **Deadline**. Late submissions will not be accepted.

Programming Question:

Write a Python program for a Mini Banking System Simulation with the Following features:

- Initial balance should be **1000**
- Display a menu repeatedly with options:
 1. Deposit Money
 2. Withdraw Money

3. Check Balance

4. Exit

Requirements:

- Deposit increases balance
- Withdraw allowed only if sufficient balance exists
- Handle invalid inputs properly
- Program should continue until user selects Exit
- Use variables, loops, conditional statements, and input handling

Explanation Requirement:

After writing the code, include a short explanation describing:

- How the program works
- How loop and conditions are used
- How balance is updated
